Why J P Systems for Clinical Interoperability

Reduce Risks to Patient Safety by Having Complete Longitudinal Patient Data from Multiple Sources

JPSYS is your Interoperability Sherpa!

Interoperability requires a multi-disciplined team to cover all aspects of clinical data exchange: Informatics, Enterprise Architecture, Data Standards, Data Quality, Business Analysis, IT Analysis, and Clinical Analysis. Complete longitudinal patient records are built by standards base data exchange.

STOP FAXING NOW!

USE DIRECT SECURE MESSAGING

NEW

You can securely send HIPAA data via Direct Messaging to 2 million providers & facilities including Long Term Care!

Faxing medical records for specialist referrals can take 2-3 weeks. Direct Messaging reduces this time to 2 hours to 2 days.

Better Data is realized when our team of Healthcare IT experts and clinicians work with your team.

Better Patient Care is achieved when clinical data is complete and accurate.

Better Outcomes happen when Clinical Decision Support systems use standardized data.

Faxes are not secure for HIPAA data – Direct Messaging is!

- Your certified EHR system already has Direct Secure Messaging.
- Direct Secure Messaging sends and receives HIPAA data securely.
- **No EHR system?** No problem. Use Direct Mail through a web portal to send patients records to the 2 existing million providers with a Direct address.

REDUCE YOUR RISK NOW!

Call J P Systems for a free consultation on your EHR implementation or transition!
